

Dravite - $\text{NaMg}_3\text{Al}_6(\text{Si}_6\text{O}_{18})(\text{BO}_3)_3(\text{OH})_3(\text{OH})$

Hardness: 7. Cleavage: Poor/indistinct. Hard enough to be cleaned with steel tools. Enclosing calcite removed with dilute HCl or steel tools. Tourmaline group minerals often have different zones of different tourmaline species, so this must be considered, although as a whole tourmaline group minerals have excellent, broad chemical resistance. Stable to Iron OUT/EDTA and hot oxalic acid.
